HEADING 1

AREAS OF INVESTIGATION

BACKGROUND ON SAM FLYNN

Sam Flynn (referred to as Flynn) is the son of Kevin Flynn the original founder of Flynn's arcade, which was very popular up until Kevin's disappearance and leaving the arcade to a young distressed boy, when Flynn grows up he ventures back to the arcade and discovers how hard his father worked for his career even finding his secret basement room where he worked on games by himself and in secret. Flynn then re-opened the arcade his arcade consisted of older styled games such as the n64 and game-cube games, he also kept the old and refinished them into his arcade. He also soled 8th gen games for the Xbox one/s/x, ps4 and Nintendo switch.

COMPARISON

Comparison of others platforms that could have been used to make and design our website. Used notepad++ do write code for our website. Notepad++ is text editor and source code editor that can be used to re-write computer programs or be used to create a website in a web browser, we could have used of used other platform to create our website such as a service called wix, weebly, sitebuilder, webflow and squarespace, these are all examples of different platforms that could have been used to create our website.

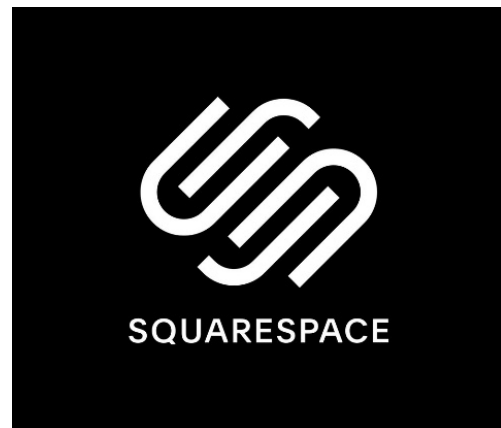

WIX

Wix is a platform that doesn't need you to write code it lets you chose a template and see if it's free and click edit to start on your new website, you're greeted with a preexisting menu, working button and hyperlinks that leads to services, blogs and contact pages wix is an easy to use drag and drop website creator platform that sucks all the work out of making a website.

SQUARESPACE

Another example of a different platform is squarespace a drag and drop site like all of the examples I've said before and also a pay for site as well all the other examples written about before. Squarespace is a pay for site that allows you access to hundreds of templates and styles of our choice they let you chose and design what you want and create your website about anything you want, but squarespace usually prides themselves on being the number one site used to make blogs online business and self-portfolios as mentioned before the site is a pay for site that ranges from \$16 to \$52 from self-websites to advance online shops and there payment methods are payed from year to year bassist. There designs are easy to comprehend and you can adjust every little detail and their websites are available on any sized screen froom mobile to wide screen monitors and if you're not happy with your template you could change it and nothing would be lost you would only have to move around images to suit your new template you can even create a website from the mobile phone app. There are some cons to the website like how you can't write a multi lingual website and that some of the design features are unusable

WEEBLY

Weebly is no squarespace and is not anything like wix, wix is flexible and squarespace is sophisticated, it's a watered down version of a website it's easy to use and simple for anyone to understand its clean and a drag and drop to add something to your website making it easy for first time

comers trying to build the online empire. Although they have small amount of templates to your disposal there pricing is very affordable. Form the basic to being free to \$42 advanced online business/shop which goes into mass amount of detail and explain to you what you're paying for unlike the examples where written about before there platform is easy to use and for the genial public they aim to be assessable and take away all complication's.

SITEBUILDER

Sitebuilder is pay for site that dose go into depth on what you'll have to do and what you'll need to pay. When you first go to the website it tells you what you need to do to get your website up and running one step being you need to pay. You need to pay to even have a look at the templates and custom options. According to reviews on sitebuilder they have over 100 different templates and is reviewed with 4's and 5's simply because it's easy to use and a drag and drop.

WEBFLOW

Webflow is an easy to use drag and drop website builder that sets you off with a blank template and lets you create whatever you want but if you want an already designed template that will cost you between \$150 and free most of them being simple and easy to work around much like the

site builder itself being easy to understand and work off. When you first lode into the site it walks you through what you need to do to create a working website and goes into great detail on why you should use webflow and how it will benefit you . Webflow is an easy to use site that tells you what you're getting in to before you start

NOTEPAD++

Note pad++ is a free appellation that you download on a web browser that always you to edit and write code that always you create style all for free but its more completed then a simple drag and drop site you need to learn code but with help of other site such as bootstrap most can be done for you. You'll still need to understand code so you know where to go and customize what you need to, to suit what you want for your website

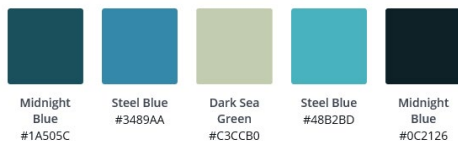

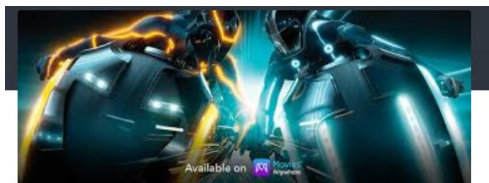

HEADING 2

DESING SKETCHES

My original design had a web banner at the top of the page and that would act like a background for the slider which would consist of video games deals and console bundles. Then there would be a dropdown menu that would let you select what

platform Xbox, PlayStation, Nintendo or pc you were looking for. Under that if you hadn't chosen what platform you wanted, there would be products for sale that were probably on sale in real world time, if you hadn't chosen what platform you wanted it would show all types of consoles and games from each gen of gaming, and of cores under that you would have your support bar, that would have you

mobile phone number and your email address along with some made outlets such as Facebook and Instagram.

HEADING 3

FINAL CONCEPT DESIGN

My design didn't change over much of the time I was allowed to design and sketch my y-frames it only changed by me changing my mind about the banner and the search/menu bar being above the slider which I didn't have in my original sketch but was now above the drop down menu which was moved to the menu

home sales new games contact us platforms ▼ contact

This is the new menu

I was having second thoughts on the logo, originally it was a big FA in a circle but I felt like that was not very creative and not special at all so I related my logo to

This is the slider

What the purpose of the website was for games. I designed a logo that look likes the original Tetris's on an arcade machine I was very happy with my how my logo turned out and decided this was going to be my final change to my design.

HEADING 4

DESIGN CHANGES

There were no more changes but add-ons I had a cool Idea and thought it would be inserting if I had more than one way of payment.

This way's of pay thing was a way of implicating different ways of paying it added more variety and creativity to my website I just had wished that added more options for payment methods other than apple pay because no one actually uses that

My menu stated the same and the where no add-ons there.

home sales new games contact us platforms ▼ contact

My slider stayed were it was last left and the drop down hadn't moved from the menu it was easily assessable and neat in the menu.

HEADING5

EVALUATION

My website looks like a scam, I would never buy anything from it the only legit thing I like about this website is the logo it looks cool, the rest is a pile of unorganized code that I'm ashamed of for example. I couldn't even style my website and make it look presentable and one of the images didn't ever show up and I could never rely how not to mention the footer and map are size of my thumb this

website is sketchy and looks like it would give ME a virus I would not use this website to buy anything and I feel embarrass about it.
